(Above are only prices for delivery port to port. Inland logistics charges are not included)

Note: 1CBM=1 M3=1cubic meter=35.3 cubic feet 1M=1meter=3.3feet 1Ton=1000Kg LCL= Less than Container Load(share container space with others)

20ft Container(5.69M\*2.13M\*2.18M ) holds 24 M<sup>3</sup>. Max allowed weight is 20Ton.

40ft Container(11.80M\*2.13M\*2.18M) holds 54 M<sup>3</sup>. Max allowed weight is 22Ton

40ft Container(11.80M\*2.13M\*2.72M) holds 68 M<sup>3</sup>. Max allowed weight is 22Ton

If the cargo os sent directly inland(by truck or rail),max allowed weight is about 16-18Ton for any container size. This criterion is only for USA.

Normally,if freight weight per cubic meter(CBM) is less than 363Kg, rate is calculated with \$/CBM volume,otherwise use \$/Ton weight.

Air cargo rate is for common cargo with weight less than 45Kg/pc; and the price excludes inflammation and war add-ons.

Both Air Cargo and Ocean Shipping require customs processing fee of about US\$250.

Express parcels nomally don't require customs processing.

DHL,TNT,EMS and FedEx are also available in China and often offer better rate then UPS
